RUBBERBOND'S **FleeceBACK EPDM**

The history of FleeceBACK

Carlisle pioneered EPDM roofing membranes more than 50 years ago and has established a strong track record of superior product durability and long-term weather resistance. We have expanded that expertise and become the world's leading supplier of roofing membranes.

As a testament to the pure value and long-term performance advantages of the FleeceBACK system, Carlisle selected FleeceBACK to protect its own corporate facilities covering almost half a million square feet.

FleeceBACK EPDM roofing systems are tough, durable and have superior wind uplift and fire ratings.

There is no better roofing system than FleeceBACK EPDM to protect against Mother Nature's worst

To date, Carlisle has produced over 10 billion square feet of roofing membrane including 160 million square feet of FleeceBACK membrane, Carlisle's puncture-resistant membrane introduced 18 years ago. EPDM is well known for its superior UV and ozone-weathering performance. Durability assessments of roofing membranes found EPDM as "the only membrane with

no reduction in flexural fatigue resistance for all tests/locations." A recent study of aged EPDM showed that after 26 years of real world exposure, EPDM still retained excellent tensile strength, tear resistance and weathering resistance. EPDM just doesn't get brittle with age.
